

## Day 2

Create a List, tuple and Dictionary with 5 elements in it and how to access few elements based on the index. Try with different examples

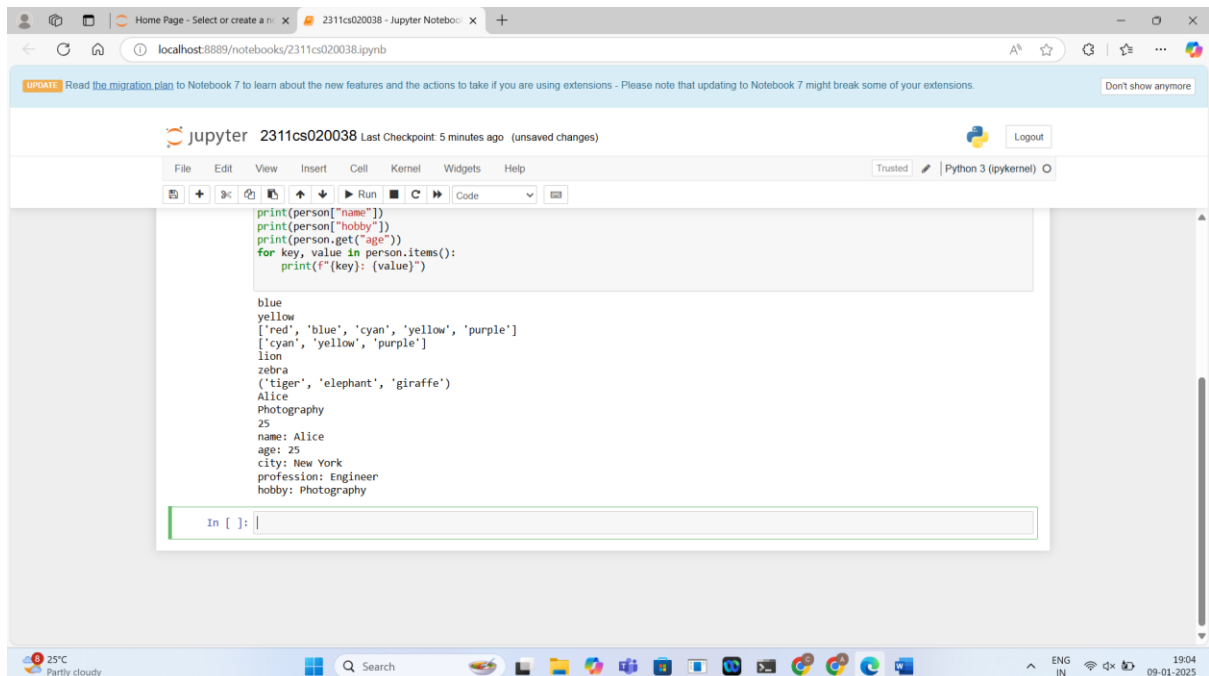

The screenshot shows a Jupyter Notebook interface with a code cell containing the following Python code:

```
In [2]: colors = ["red", "blue", "green", "yellow", "purple"]
print(colors[1])
print(colors[3])
print(colors[2])
colors[2] = "cyan"
print(colors)
print(colors[2:])
animals = ("lion", "tiger", "elephant", "giraffe", "zebra")
print(animals[0])
print(animals[-1])
print(animals[1:4])
person = {
    "name": "Alice",
    "age": 25,
    "city": "New York",
    "profession": "Engineer",
    "hobby": "Photography"
}
print(person["name"])
print(person["hobby"])
print(person.get("age"))
for key, value in person.items():
    print(f"{key}: {value}")
```

The output of the code is displayed below the cell:

```
blue
yellow
['red', 'blue', 'cyan', 'yellow', 'purple']
['cyan', 'yellow', 'purple']
lion
zebra
{'tiger', 'elephant', 'giraffe'}
Alice
Photography
25
name: Alice
age: 25
city: New York
profession: Engineer
hobby: Photography
```

The screenshot shows the same Jupyter Notebook interface with the same code cell. The output of the code is displayed below the cell:

```
blue
yellow
['red', 'blue', 'cyan', 'yellow', 'purple']
['cyan', 'yellow', 'purple']
lion
zebra
('tiger', 'elephant', 'giraffe')
Alice
Photography
25
name: Alice
age: 25
city: New York
profession: Engineer
hobby: Photography
```
